SUMMARY

Aspiring Full-Stack Developer with a strong interest in cloud and DevOps practices. I build practical web applications across the frontend and backend, with hands-on experience deploying containerized applications and improving delivery through Git, CI/CD, cloud services, and monitoring. I bring clear communication, structured problem-solving, and a focus on building reliable, user-friendly products. Seeking a junior full-stack software engineering role where I can grow deeper expertise in cloud infrastructure and automation.

PROFESSIONAL DEVELOPMENT

Generation

Junior Software Developer Program 2026

- Completed intensive training in full-stack web development using the MERN stack.
- Worked with PostgreSQL and MongoDB for database design, data management, and application development.
- Built projects using REST APIs and Git/GitHub as part of a collaborative software development workflow.
- Applied software development practices including problem-solving, debugging, version control, and team collaboration.
